

COVID-19 VACCINE DECISION TREE

Primary Series

¹The CDC defines immune-compromised as individuals who have:

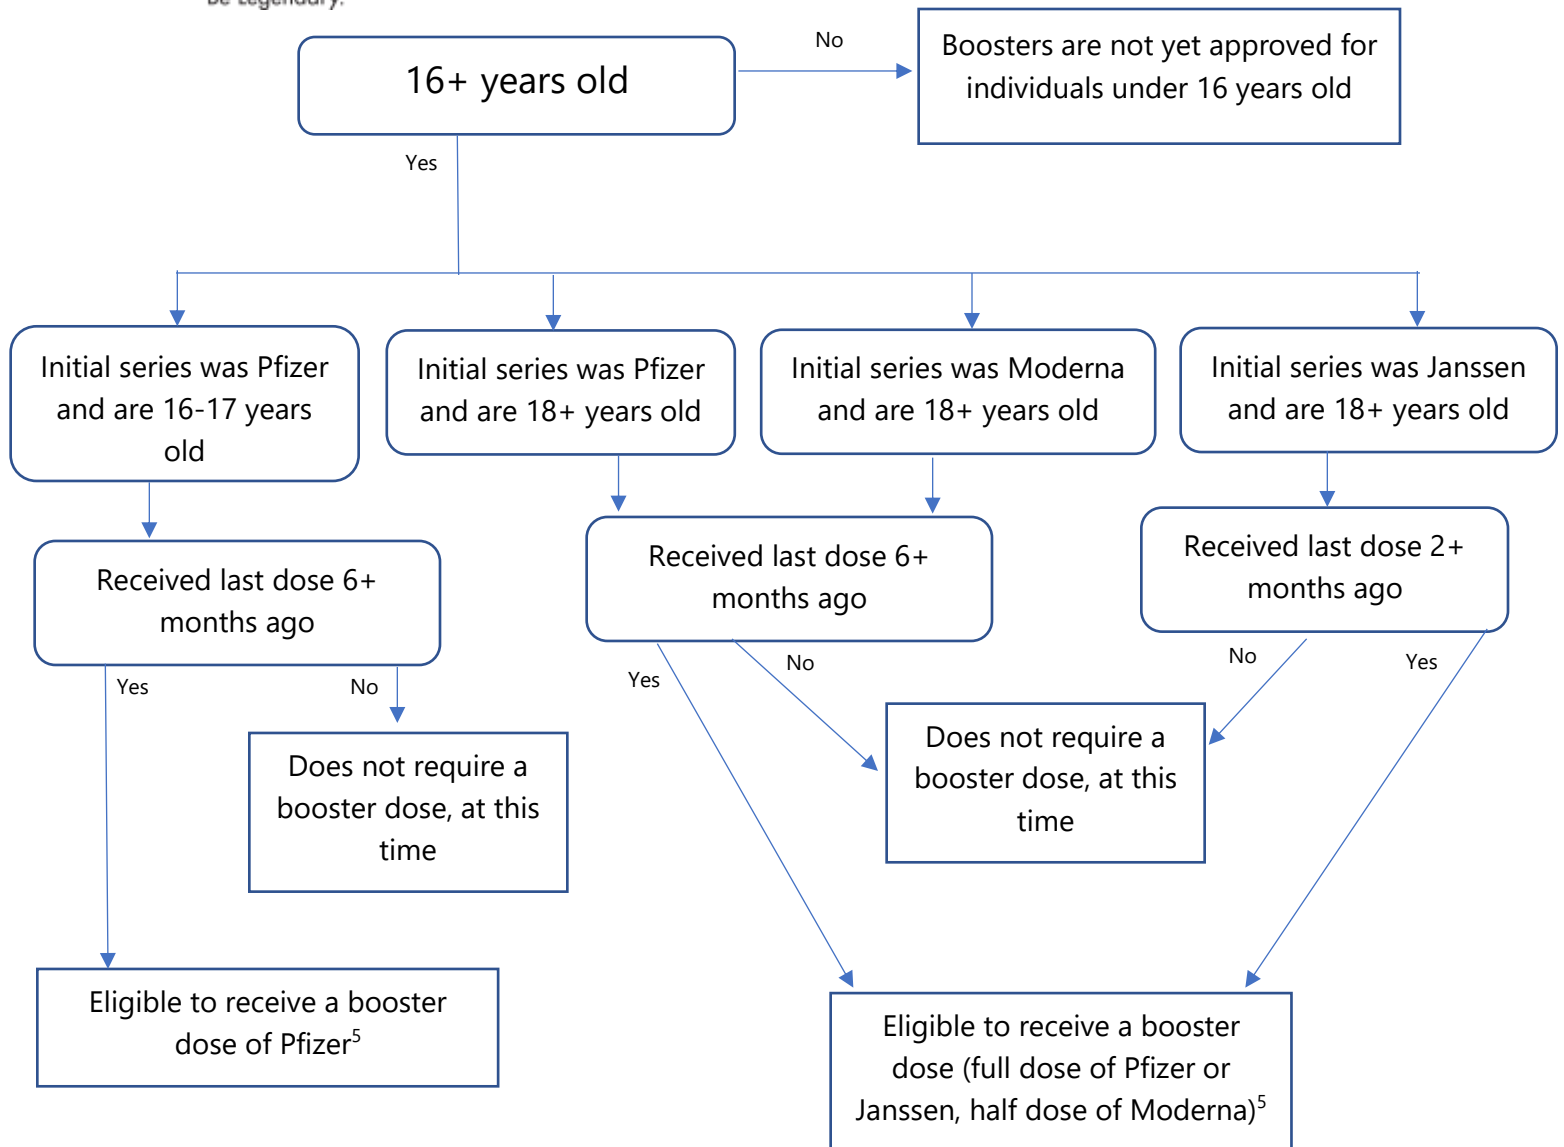

- Been receiving active cancer treatment for tumors or cancers of the blood
- Received an organ transplant and are taking medicine to suppress the immune system
- Received a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
- Moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids or other drugs that may suppress your immune response

² Primary series dose volumes are as follows:

- Pediatric Pfizer (ages 5-11) 0.2mL
- Pfizer (ages 12+) 0.3mL
- Moderna 0.5mL
- Janssen 0.5mL

³ Immune-compromised individuals should consider receiving a booster dose of Janssen two months after their initial dose.

Booster Doses

⁴Underlying medical conditions are those which put a person at increased risk of experiencing severe illness, if they contract COVID-19. For an updated list, please visit the CDC website [here](#).

⁵Booster dose volumes are as follows:

- Pfizer 0.3mL
- Moderna 0.25mL
- Janssen 0.5mL

For additional questions, please refer to the [CDC guidelines](#) on vaccine booster eligibility.
